**DETAILED ACTION**

***Election/Restriction***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-12 and 17-19, drawn to a device for performing fluid flow , classified in class 204, subclass 601.
  - II. Claims 13-16, drawn to an electrophoretic separation process , classified in class 204, subclass 451.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process (MPEP § 806.05(e)). In the case the process as claimed can be practiced by another materially different apparatus such as an apparatus having selective having the surface of microchannel to be modified.

1. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 1713

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

### *Conclusion*

6. The summary of claim 1 is as follows,

The present invention relates to a device for performing fluid flow, comprising

(1) a capillary channel	an inert wall surface
	two ends
	a cross section of less than about $200 \times 10^{-9}$ square meters
(2) integrated external electrode(s)	spaced apart from the inner wall surface of the capillary channel by a distance of less than about $160 \times 10^{-6}$ meters to provide a perpendicular voltage field to the capillary channel
(3) two longitudinal electrodes	positioned at the intermediate ends of the capillary channel

Art Unit: 1713

	to provide a longitudinal voltage field through the capillary channel
